Fruit Ridge Notes  
from Ron Reister  
C.C.A.

## Fruit Ridge Notes - Monday - July 1st - 2019

*Hey Friends .... A Doggone Nice Day to Start this 'Short-Week'.....*

*Thursday is the 4th of July - Independence Day...!!!!*

The Crew here is planning on Thurs-Fri-Saturday-Off...!!!

**But....** If You have a 'Situation'...??..something unexpected comes up...???

My Mob.Ph.=616-437-0073

....Matts=616-808-9774 ....Alicia=616-952-1234

**Delivery Schedule is Jerked-Around a bit for this Short Week**

.....

We will be Loading Trucks Today for early departure Tuesday South Run...

....Heading South Tomorrow.... and doing the Traverse Area and the Hart-Shelby Area Wednesday.

Both Days we will be getting the Trucks out early...so please let us know of any last-minute Needs as soon as you can.

\*\*\*\* **MSU says Several "Strobie" Fungicides** and those containing 'Boscalid' have inefficiencies due to Resistance in several **Vegetable Crops ...**

I really like 8oz-Ac. 'Toledo 3.6F' [an old S.I.-Tebuconazole] for **\$3.80-Ac....** Mixed with 40 - 48 oz.KoverAll[Dithane] for **\$8-Ac.** and with 2 - 3 Pt.-Ac. SuperPhite at **\$7 - \$10.....** Total \$20.

For another \$6 you can also add 12 - 15 oz.CS2005.

**Ya know....** Some of those that are known to have 'Resistance-Issues' are still Labeled and being marketed for your...

\*GummyStemBlight & \*Downy & \*Powdery ...and are costing Growers\$39... \$50 ...\$35 ...per Acre. ☹

Some Smart Money Guys I was visiting with are also using 1 Qt. SAver to get that "S.A." in their Tank-Mix.

There are also some "Ol-Stand-By" trusted MicroNutrient sources being used. Some Guys make a separate-Special-Trip because of the "Tank-Mix-Jitters" ...???

Here is a Suggestion.... Look at our "Triples-Micro" from Redox.... This ReActed Plant Nutrient Features \*2%Boron \*2%Copper \*6% Iron \*6% Manganese \*.001%Moly \*6%Zinc.

No other MicroPak is made this way. The Plant Response is phenomenal. Use 9 oz - 14 oz-Ac.= **\$6 - \$9-Ac.**Cost. Do this App every 2 Weeks.

Also.... a Reminder that our DiKaP is a ReActed-HiCarbon-31%Phos-50%Potassium-Redox Product that is amazing... No other P-K-Product is made this way.

Some of the Veggie Guys having superb results are doing 9 - 12 oz-Ac-every week....**\$6.50** ...and remember that the DiKaP also has S.A. in its complex.

**\*\*\*\* Remember How Xtreme-Low-Cost-Cheap it is to Control PLH - Potato Leaf Hoppers** in your

beautiful *New-Young-Hi-Investment-Blocks*....and also in your Nurseries...???

You also remember that a single **PLH** Nymph can shut down the growth of the Leader on a young Tree for 2 - 3 Weeks.... ??

When you calculate your per-acre-co\$t of the TRV-Rates you use of LambdaCy[**Warrior**]\$1.45 & Imidacloprid \$1.70, you'll see that your Diesel Fuel per-acre cost is apprx 3 time\$ more than the Pesticides.

**Any** of those Youngens stressed at all from too much Rain...??? ...or Stressed from anything....??? TRV-VitaZyme=**\$4.50**... Also with **Organic** Label

**\*\*\*\* Apple Guys Getting Into Your "Return-Bloom-Spray-Program"** ...Please be very careful with the Ethephon-Type-

Products when you see some Hi-Temps-Forecasted within the UpComing Several Days.... Anything close to 90°F spells Trouble.

Alicandro says 'Do not use Ethrel within 6 Weeks of Harvest on Any Variety'....Due to PreMature Fruit Drop Concerns. He said "'Dont even let any Drift get onto the 'Ethylene-Susceptible-Varieties' like Gala--Gingers--Zestar--Jonamac--Empire--RedCort--or any Mac-Types.'"

**\*\*\*\* Some Guys... Including some Serious Experts & Researchers....** have observed that certain Foliar Nutrients, like

the Soluble-20-20-20's, can aggravate Bitter-Pit incidence levels in varieties like HoneyCrisp. To do serious Nutrition and simultaneously help prevent Bitter-Pit, stay with the Redox Strategy. Always firmer Fruit .... better Brix .... less Bitter-Pit.

**\*\*\*\* Mark Twain said....**

**"Suppose you were an Idiot. And suppose you were a member of Congress. But then I repeat myself." 🙄🤔**

***Have a Great Week .....r***
